

# Water Stewardship Statement

## Overview

Clean water is the most important natural resource in the world. No discussion of sustainability is complete without consideration of the ways we will protect, conserve and manage the water we all depend on. As a leader in water, Zurn Elkay aims to be at the forefront of water management in our operations and products, and we seek to continuously improve our ability to track, manage, and reduce our water use.

As climate change and other factors continue to impact availability and access to water resources, we are committed to pursuing water stewardship excellence in our direct operations and throughout our supply chain. Through our operations and partnerships, we aim to protect and restore water resources, support climate resilience, and help ensure access to clean water for all.

## Commitments

Through our water risk assessments and sustainability strategy, we are committed to the following:

- Reviewing water data by facility annually to achieve a detailed understanding of water use throughout our operations
- Building a culture of continuous improvement as water stresses and their inherent risks evolve by employing a multi-tiered approach to our facilities' water management and sharing responsibility across the entire organization
- Engaging stakeholders in our water-related efforts, including employees, customers, suppliers, and communities, and communicating goals and results through recognized frameworks such as GRI, SASB, and CDP Water Security.
- Communicating and reinforcing our policy and strategy to all our employees, contracted partners, and interested stakeholders, including through our Supplier Excellence Manual and sustainability governance practices
